

Customer Journey Map

Metro Ticket Generating System in ServiceNow

Date: 25 September 2026

Persona: Rahul, a daily metro commuter

Based on the Problem Statements, Empathy Map and Brainstorming documents of this project

SCENARIO		Entice				Enter					Engage		Exit		Extend	
Browsing, booking, paying for, using and reviewing a metro ticket digitally		How does Rahul become aware of digital ticketing?				What happens as he registers, books and pays?					What happens in the core moments?		What happens as the journey finishes?		What happens after the trip?	
1	Steps	Notices queues	Learns of digital ticket	Opens the portal	Registers / logs in	Selects journey	Views fare	Confirms booking	Pays digitally	Receives QR ticket	Enters station	Travels	Reaches destination	Exits station	Views history	Gives feedback / refund
	What does Rahul typically do?	Rahul sees long counter queues and other passengers paying through UPI / QR.	He learns that metro tickets can be booked online through the ServiceNow Service Portal.	He opens the Service Portal on his phone or laptop browser.	He registers once with name, mobile, email and password and confirms through email / OTP.	He picks the source and destination stations, number of passengers and ticket type.	The fare is calculated automatically, with the round-trip discount where applicable.	He checks the booking summary and proceeds to payment.	He chooses UPI, card or wallet and completes the (simulated) payment.	A unique QR ticket appears in the portal and is sent by email / SMS.	He scans the QR code at the entry gate and is validated in seconds.	He travels without cash, counters or paper tickets.	He reaches his destination on time without the queue stress.	He scans the QR code at the exit gate; the ticket is marked Used.	He checks his booking history and downloads past tickets.	He can cancel an unused ticket for a refund or contact customer care.
2	Interactions	Station queues, posters, other commuters	Service Portal link, station signage	Service Portal (phone / laptop browser)	Registration form, email / OTP	Service Catalog: Book Ticket form	Fare matrix via Service Portal	Booking summary page	Simulated payment page (UPI / card / wallet)	Portal ticket view, email / SMS	Entry gate: QR validation	No interaction needed on the train	Destination station	Exit gate: QR validation	My Tickets page	Portal, customer care executive
	What touchpoints does he use at each step?															
3	Goals & motivations	Help me avoid the queue	Help me find a faster way to travel	Help me start quickly	Help me sign up without hassle	Help me choose stations easily	Help me know the fare upfront	Help me be sure my details are right	Help me pay safely and quickly	Help me get my ticket instantly	Help me enter without delay	Help me reach on time	Help me arrive on time	Help me exit smoothly	Help me keep a record of trips	Help me fix any problem fast
	What is his primary goal at each step?															
4	Positive moments		Sees that other passengers already pay digitally.		One-time registration, then quick login.		Fare appears automatically; no guessing.		Familiar UPI / card / wallet options.	QR ticket in seconds, no printing.	No cash and no counter needed.		Arrives on time without queue stress.	Automatic fare check at the exit gate.	Clear digital record of all past trips.	
	What does he find easy, fast or delightful?															
5	Negative moments	Wastes time in the queue and risks missing the train.			Forgotten password or delayed OTP.	May pick the wrong station by mistake.			Worry about payment failure or double charge.	Slow network may delay the QR display.	QR scan fails if the screen is dim.			Expired or already-used QR is rejected.		Refund may take time.
	What does he find frustrating or time-consuming?															
6	Areas of opportunity		Show a 'Book without queue' banner at stations.		Offer Gmail sign-up and remembered login.	Save recent and favourite routes.			Automatic retry and clear failure message.	Keep the QR viewable offline and at high brightness.	Clear scan guidance and retry at the gate.			Show ticket expiry time before the journey.		Give refund tracking and quick support.
	What ideas do we have to improve each step?															

Persona and pain points are taken from the project's Empathy Map (Rahul, daily metro commuter); payment in this project is simulated.
